

Scripting Languages: Workshop 8 Challenge

1. Now that you have completed your **dirscan_b.sh** script, make a new version of it called **dirscan_c.sh**
2. Enhance the **dirscan_c.sh** script by thinking of a new *useful* feature you can add to it, and then implement this feature by updating the code as required
3. Be sure to document and explain the new feature you have added as comments in the script, along with any instructions I need to run it when you send it to me for review and feedback.
